

L1 – Welcome and Course Orientation

P1 Energy • AQA Combined Science: Trilogy 8464

Physics 10 P • Mr. Rawson • 19 students

Date	Monday 31 August 2026	Room	PH1
Period	P5, 14:05–15:00 (55 min)	Paper	Physics Paper 1
Lesson	1 of 11, first meeting	Next lesson	Tue 1 Sep, P4
To print	19 course expectations sheets and 19 P1 overviews. Course page: rawsonvault.com/physics/aqa-gcse/p1-energy		
Homework	Read the P1 overview and tick every statement you think you already met in Year 9. Bring it Tuesday. Not marked — it sets up L2.		

By the end of the lesson students can:

- say what is expected of them, and what the AI rule is;
- find the course page unaided, and say what they would do having missed a lesson;
- say what P1 Energy covers, and which equations they must *recall* rather than look up.

Timing

Time	Phase	What happens
before P5	Printing	19 + 19, per the table above. Seating plan on the desk.
14:05–14:12	Settle	Straight after lunch — seated and quiet first. Names, preferred names, seating plan. Kit: book, calculator, ruler.
14:12–14:25	Expectations	Walk the sheet, do not read it aloud. Land three things: what a good exercise book looks like, what happens when work is missed, and the AI rule — own thinking, AI scores zero .
14:25–14:35	The course page	Open the course page on the board. Summary, Assessments, Lessons. Have them find the walkthrough themselves — 31 captioned figures. <i>This is the answer to “I was away”</i> .
14:35–14:50	P1 orientation	Hand out the overview. Three sub-topics: P1.1 energy changes, P1.2 conservation and dissipation, P1.3 energy resources. Point at the RECALL vs EQUATION SHEET tags — that distinction earns marks.
14:50–15:00	First taste	“Name every place energy is stored right now in this room.” Board list, group into stores. Sets up L2. Set the homework.

Questions to ask

1. You say the battery is “used up”. Where has the energy actually gone?
2. You missed Thursday. Talk me through exactly what you do.
3. Which of these must you know by heart, and which are handed to you in the exam?
4. Name something in this room storing energy that nobody has said yet.

Common misconceptions

- **“Energy gets used up.”** The single most persistent idea in the whole course. It is transferred and dissipated, never destroyed. Start correcting it today.
- **“Energy and force are the same thing.”** They will use the words interchangeably. Separate them early or P1 and P5 both suffer.
- **“Combined Science means less content.”** Less *time*, same rigour. Say so plainly now rather than in March.

Differentiation

Support: preferred names on the seating plan from day one. For anyone who struggles with the overview sheet, work the first tick-box together.

Extend: ask which P1 statements they think they already met in Year 9, and which look genuinely new — it gives you a free prior-knowledge audit.

After the lesson

- Mark the Class Log entry **Taught**, and note who was absent — they will need the course page and the expectations sheet.
- Which Year 9 statements did they claim on the overview? That is your starting point for **L2**, tomorrow P4.
- Did the “used up” misconception surface? If it did not, plant it in L2 deliberately rather than waiting for it.
