

Name: _____

Date: _____

Mr. Rawson • Y8 MYP Design

My Game Design

Explain your game so clearly that somebody else could build it

What this packet is marked on

You are marked on **how clearly you explain your plan**. Your code does not need to be finished, and your game does not need to work yet.

A reader should finish this packet knowing **what your game is**, **who would enjoy it**, and **exactly what happens** when a player presses **A**, **B**, **A+B** or gives it a **shake**.

How it works. There are **eight parts**. Each one has a blue label on the right, **Ai** for example, which matches a column on your *What You Are Marked On* sheet. Work through the parts in order and write in full sentences. Have the criteria sheet open beside you.

The word that moves you up is “because”. Every time you make a choice, say why.

My game

Name of my game: _____

Good communication is concise

Concise means saying something in as few words as possible, without losing what matters. Write **one or two sentences** that tell somebody exactly what your game is.

If your game is based on one from the menu, say what is **different** when it is played on a micro:bit instead of the normal way.

My game, in one or two sentences:

Ai

Example — Tic-Tac-Toe

[illegible]

2 The games I looked at

A iii

Name **two other games** you thought about choosing, from anywhere on the menu. Then say why you chose your own game over both of them.

Example

I thought about Magic 8-Ball and Rock Paper Scissors. I chose Tic-Tac-Toe instead because it has a lot more steps, so it felt like a good challenge. I have done a lot of coding before, mostly Scratch projects, and Tic-Tac-Toe is a completely new idea for me, so I am excited to see if I can build it. I am hoping I can build it and then test it out with friends, and maybe later add a scoring system for wins and losses.

Other game 1: _____

Other game 2: _____

I chose my game over these two because

3 The interview

A ii

Interview **one classmate** about your game idea. Ask a few quick questions, and write down what they say.

Example — interviewing about Tic-Tac-Toe

Q: *When was the last time you played Tic-Tac-Toe, and did you win or lose?*

Q: *Do you usually win? Do you think you are a good player?*

Q: *What is a strength of a game like Tic-Tac-Toe? What is a weakness?*

Q: *If I built my own version and could design it however I wanted, do you have any suggestions on how it could be more fun?*

A “no” does not help you much on its own — if you get one, ask what they would change instead.

Who I interviewed: _____

	Here’s my interview questions	Here are the interview answers
1		
2		
3		

Because of my interview, I am now thinking about...

Make it count

Think about the interview answers and how they could make your game **better**. How has this changed your thinking about the design? A one-word answer like “none” is too weak to earn marks here.

4 My design brief

A iv

Your design brief pulls Parts 1 to 3 together into one paragraph. Complete each sentence. A strong brief says “**so** at least twice, because that shows it grew out of your research.

My game is called _____ and it is a _____
game

for _____ .

The player’s goal is to

From the games I looked at, I learned that

so my game will

The person I asked told me

so my game will

5 My success criteria

Write the things your game **must do** to count as finished. Write each one so that somebody else could hold your micro:bit and tick it off.

Example — Frog Hop

1. *Pressing A makes the frog jump up one light.*
2. *A round lasts 20 seconds, then the score shows.*
3. *Two players can take turns without restarting the micro:bit.*

Check: each criterion you write names something a person could *see* or *count*.

#	My game must ...	Somebody else could tick it
1		☐
2		☐
3		☐
4		☐
5		☐
6		☐
7		☐
8		☐

6 Three ways my game could work

B ii

Design **three different versions of your game**, each using the micro:bit's inputs in a different way. Same game, three sets of controls. Fill in what each input does, and draw what the screen shows.

Version 1

A _____

B _____

A+B _____

shake _____

the screen

What is different about this version: _____

Version 2

A _____

B _____

A+B _____

shake _____

the screen

What is different about this version: _____

Version 3

A _____

B _____

A+B _____

shake _____

the screen

What is different about this version: _____

An input you do not use in a version: write **not used**.

7 The version I am building

B iii

Choose one of your three versions. Explain your choice by pointing at your success criteria in Part 5, by number.

Example — Frog Hop

I am building Version 2, because shake-to-jump meets criterion 1 and it is the one my cousins found easiest. Version 3 used A+B, which is hard for small hands to press at the same time.

I am building Version _____

I chose it because it meets criteria number _____, and

I did not choose the other two because

This is the plan somebody else would build from. Make it exact.

a The controls

Input	What happens in the game	What the screen shows
A		
B		
A+B		
shake		
Anything else?		

b The screens

Shade the lights that are on. Label anything that moves.

At the start

During the game

When you win

When you lose

c How a round works, step by step

Write what happens from switching on to the end of one round, in order.

1. The micro:bit switches on and

2.

3.

4.

5.

6.

d The blocks I will need

Tick every block your game will use, and write what it does in *your* game. You do not need to know yet how they fit together.

✓	Block	What it does in my game
☐	on start	
☐	forever	
☐	on button ... pressed	
☐	on shake	
☐	show icon / show number	
☐	a variable called _____	
☐	if ... then ... else	
☐	pick random	
☐	pause (ms)	
☐	_____	

Before You Hand It In

Tick each one

- ☐ All **eight parts** have writing in them.
- ☐ Part 1 names **a real person or group**, and says **why** they would play.
- ☐ Part 2 gives every game something it does well **and** something it does less well.
- ☐ Part 3 has the **exact words** of the person I asked.
- ☐ My design brief in Part 4 says **“so”** at least twice.
- ☐ Every success criterion in Part 5 is something a person could **see or count**.
- ☐ My three versions in Part 6 use the inputs in **three different ways**.
- ☐ In Part 7 I pointed at my success criteria **by number**.
- ☐ Part 8 says what **A**, **B**, **A+B** and **shake** each do, or **not used**.
- ☐ A classmate read Part 8 and could explain my game back to me.

The last check, and the best one. Hand Part 8 to somebody sitting near you. Ask them to tell you how your game works without looking at you. If they can, your plan is clear.
