Starting Your Game Lab Project

Set it up once, then build your card

1. **Code** and **Animation** tabs: write code, or make pictures.
2. The **canvas**, always 400 × 400. Your card appears here.
3. **Run** draws your card.
4. **Show grid** lays coordinates over the canvas, so you can read x and y.
5. The **Toolbox**. Drag a block into your code; click one to read how it works.
6. Your **code**.

A Set up

1. Sign in to code.org, so the project saves to your account.
2. **Projects** → **Game Lab**, under *Beyond Blocks*.
3. Rename the project **⟨Your Name⟩ Digital Greeting Card**.
4. Delete the three lines `function draw() { }`. They are the draw loop from Level 12. Without them your card runs once, top to bottom, just like Levels 3 to 10.

Check: the code area is empty, and Run gives a white canvas.

B Add your pictures

1. Click **Animation**, top left.
2. Click the **+** to add a picture: pick one from the **library**, upload an image from your computer, or **draw** your own.
3. Give it a short, clear name, such as `boat`. Every picture you add is listed down the left-hand column.
4. Click **Code** to go back.

A still picture counts as an animation with one frame, so every picture on your card lives in this tab.

C Put a picture on the card

```
var boat = createSprite(200, 240);
boat.setAnimation("boat");
drawSprites();
```

- The name in quotes matches the Animation tab **exactly**, capitals included.
- A sprite without `setAnimation` shows as a **grey rectangle**: a handy placeholder while you make its picture.
- `drawSprites()` puts every sprite on the canvas. Write it after your background and shapes, and before your text.

D Which drawer?

Drawing	`background`, `fill`, `rect`, `ellipse`, `text`, `textSize`
Variables	`var`
Math	`randomNumber`
Sprites	`createSprite`, `setAnimation`, `drawSprites`, `scale`, `rotation`

Those four drawers hold everything from Levels 1 to 10. **World**, **Groups**, **Control** and **Functions** are for later levels.

Your project saves as you work. Find it again on the code.org **Projects** page, in your own list of projects.
