

Name: _____

Class: _____

Mr. Rawson • GCSE Computer Science

Year 10 2026

1.2 Exit Ticket

Cards away. Books closed — no notes, no reference strip. Five minutes. Write all eight digits, including leading zeros. We mark it together off the board before you leave.

Part A

the same four questions as Tuesday, with different numbers

1. Convert the 8-bit binary number 00101100 into denary. [1]

Answer: _____ **44** _____

2. Convert the 8-bit binary number 10110010 into denary. [1]

Answer: _____ **178** _____

3. Convert the denary number 20 into 8-bit binary. [1]

Answer: _____ **00010100** _____

4. Convert the denary number 176 into 8-bit binary. [1]

Answer: _____ **10110000** _____

Part B

today's new ground

5. Write the byte 1010 0111 in hexadecimal. [1]

Answer: _____ **A7** _____

Marking — read this off the board, one line at a time. 1 mark each, correct answer only. Place values: 128 64 32 16 8 4 2 1. Q1 = 32 + 8 + 4. Q2 = 128 + 32 + 16 + 2. Q3 = 16 + 4. Q4 = 128 + 32 + 16. Q5: split 1010|0111 → 10 and 7 → **A7**. Check: $10 \times 16 + 7 = 167$, and $10100111 = 167$.

Q3 and Q4 must be 8 bits — a correct value in fewer digits still scores, but flag it, the exam does not allow it.

The comparison is the point. Part A is Do Now 02's four item types with new numbers. Put both distributions in the Class Log. If Part A has moved and Part B has not, the manipulative worked and hex needs another lesson — which is a different problem from the one on 8 Sep, and a much better one to have.

Booklet pp. 5–11. Questions written for this class.
