Programming Challenge: WHILE Loops

Guess the Number Game (MEDIUM) — Answer Key

https://isaaccomputerscience.org/questions/whileloops_medium

- Write a Python program that picks a random number between 1 and 100.
- The user has to guess the number.
- The program will tell the user if the guess is too high, too low, or correct.
- The game continues until the user guesses the correct number.

Example Output:

```
> Guess the number: 50
Too high

> Guess the number: 25
Too low

> Guess the number: 37
Correct! The number was 37
```

Previous Knowledge Needed

- import random (line 2)
- WHILE loops (line 12)
- != (not equal to) (line 12)
- IF, ELIF and ELSE (line 18)

Alfred's answer, v2.

```
1 # picks a random number = the random library
2 import random
3
4 # between 1 and 100 = random.randint(1, 100), kept in secret_number
5 secret_number = random.randint(1, 100)
6
7 # (no guess yet) = guess = 0: never the secret (1 to 100), so the loop starts
8 guess = 0
9
10 # The game continues until the user guesses the correct number
11 # = while guess != secret_number:    (!= means "is not equal to")
12 while guess != secret_number:
13
14     # The user has to guess the number = int(input())
15     guess = int(input("Guess the number: "))
16
17     # tell the user if the guess is too high = if guess > secret_number:
18     if guess > secret_number:
19         print("Too high")
20
21     # too low = elif guess < secret_number:
22     elif guess < secret_number:
23         print("Too low")
24
25     # or correct = else:    (prints: Correct! The number was 37)
26     else:
27         print("Correct! The number was", secret_number)
```
