

Name: _____

Class: _____

Mr. Rawson • GCSE Computer Science

Year 10 2026

1.2 Do Now

Five minutes. Books closed — no notes. Write all eight digits, including leading zeros. Hand this in when the timer stops.

1. Convert the 8-bit binary number 00101010 into denary. [1]

Answer: _____ **42** _____

2. Convert the 8-bit binary number 10010110 into denary. [1]

Answer: _____ **150** _____

3. Convert the denary number 12 into 8-bit binary. [1]

Answer: _____ **00001100** _____

4. Convert the denary number 200 into 8-bit binary. [1]

Answer: _____ **11001000** _____

Marking: 1 mark each, correct answer only — no working required at this tariff. Q3 and Q4 must be 8 bits; a correct value written in fewer than eight digits (e.g. 1100 for 12) still scores, but flag it, because the exam does not allow it.

Place values: 128 64 32 16 8 4 2 1. Q1 = 32+8+2. Q2 = 128+16+4+2. Q3 = 8+4. Q4 = 128+64+8.
