

Name: _____

Class: _____

Date: _____

Mr. Rawson • GCSE Physics

P2 Electricity – What Have We Covered?

This is not a test and it is not marked. It tells me where to start, so be honest — guessing high costs you lessons you needed. Work down the list and tick **one** box per row.

✓ **Fine** — we did it and I could answer a question on it. ~ **Shaky** — we did it, but I would struggle.
 × **New** — I do not think we covered this.

		✓ Fine	~ Shaky	× New
P2.1.1	Circuit diagram symbols — reading and drawing them	☐	☐	☐
P2.1.2	Charge and current $Q = It$	☐	☐	☐
P2.1.3	Current, potential difference and resistance $V = IR$	☐	☐	☐
RP15	<i>Practical:</i> what affects resistance — wire length, resistors in series and parallel	☐	☐	☐
P2.1.4	Resistors: ohmic and non-ohmic, filament lamp, diode, thermistor, LDR	☐	☐	☐
RP16	<i>Practical:</i> I – V characteristics of a lamp, a diode and a resistor	☐	☐	☐
P2.2 a	Series circuits — the rules, and calculating	☐	☐	☐
P2.2 b	Parallel circuits — the rules, and calculating	☐	☐	☐
P2.3.1	Direct and alternating potential difference (d.c. and a.c.)	☐	☐	☐
P2.3.2	Mains electricity — live, neutral and earth; three-core cable; safety	☐	☐	☐
P2.4.1	Power $P = VI$ $P = I^2R$	☐	☐	☐
P2.4.2	Energy transfers in appliances $E = Pt$ $E = QV$	☐	☐	☐
P2.4.3	The National Grid and transformers [HT]	☐	☐	☐

Anything you remember doing that is not on this list?

Which one of these worries you most? _____

Teacher master — 11R coverage vs 11Q

The **11Q** column is what Robert recorded for the parallel set in y10-y11 electricity status.xlsx (92 statement-level entries). Sharon's 11R column in that file is **blank** — one entry in total — so 11R's coverage below is what this lesson establishes. 11Q is a hypothesis, not a record. Tally the class, then write the result into column L.

		11Q recorded	11R tally (of 10)		
			✓	~	×
P2.1.1	Circuit symbols	Part			
P2.1.2	Charge and current, $Q = It$	Yes			
P2.1.3	Current, p.d., resistance, $V = IR$	Yes			
RP15	Practical: resistance factors	Part			
P2.1.4	Resistors, non-ohmic components	No			
RP16	Practical: I – V characteristics	No			
P2.2 a	Series circuits	Yes			
P2.2 b	Parallel circuits	No			
P2.3.1	d.c. and a.c.	No			
P2.3.2	Mains electricity and safety	No			
P2.4.1	Power, $P = VI$, $P = I^2R$	Yes			
P2.4.2	Energy transfers in appliances	Yes			
P2.4.3	National Grid, transformers [HT]	No			

Detail worth probing, from 11Q's record

- **RP15 is half done** — resistors in series and parallel were investigated; *the length of a wire was not*. Ask specifically.
- **P2.2 splits cleanly** — series rules were taught, parallel rules were not, and *no series/parallel calculations* were done by either route. Calculation is the gap, not the concept.
- **One statement in P2.1.2 was missed** — “a current has the same value at any point in a single closed loop”. Small, but it underpins everything in P2.2.
- **All of P2.3** (a.c./d.c., mains, three-core cable, earth wire) is outstanding for 11Q — 13 statements, and cheap to teach.

Also inherited: columns I and J of that spreadsheet hold Robert's written revision notes, pitched at “aiming for an 8” and “aiming for a 9”. Four cells carry xxx placeholders where diagrams were meant to go.
